DETAILED ACTION

Response to Amendment

1. This office action is in response to the amendment filed on 03/17/2010. Claims 11-14, 17 and 20 have been cancelled.

Allowable Subject Matter

2. Claims 1-3, 6-7, 15-16, 18-19 and 21 are allowed.

3. The following is an examiner's statement of reasons for allowance. The present invention is directed to apparatuses and methods for controlling copy/payback of content utilizing copy control information embedded as watermark in the content. More specifically, independent claim 1 identifies the uniquely distinct features: said recording section (i) does not record said content when said detection result indicates that said content is said "no_more_copy" and (ii) records said content without determining that said copy control information is said information indicative of said first condition or is said information indicative of said second condition, by further analyzing said copy control information when said detection result indicates that said content is said allowable copy. "Amendment 3 to SDMI Portable Device Specification, Part I, Version 1.0" (hereinafter "SDMI Amendment 3") discloses that content shall be admitted into the local SDMI environment if the copy control information (CCI) bits are not set to "no more copy"; however "SDMI Amendment 3" does not disclose how content copying is controlled. Winograd, "Audio Watermarking Technologies for Protection of Digital Audio and Video", discloses embedding CCI in content (slide 7) and controlling copy of content using the embedded CCI bits (slides 10-16); however, Winograd discloses that

Art Unit: 2432

the CCI bits are used for only two copy conditions: one copy allowed [1,0] and no more copies [1,1] and that the CCI bits are changed from [1,0] to [1,1] for a valid copy. "4C 12 Bit Watermark Specification" (hereinafter "4C Watermark") discloses using the CCI bits for three copy conditions: "copy freely" (0,0), copy one generation (1,0) and no more copies (1,1); however, "4C Watermark" does not disclose how the CCI bits are used to control copy of content. The prior art, taken either singly or in combination, fails to anticipate or fairly suggest the limitations of applicant's independent claim, in such a manner that a rejection under 35 U.S.C 102 or 103 would be proper. The claimed invention is therefore considered to be in condition for allowance as being novel and nonobvious over prior art.

Independent claim 15 identifies the uniquely distinct features: wherein for recording of said content, said electronic watermark detection section detects only a predetermined copy control information portion of said copy control information out of said content over which the electronic watermark expressing said copy control information is superimposed, and for playback of said content, said electronic watermark detection section detects all of said copy control information out of said content over which the electronic watermark expressing said copy control information is superimposed. Winograd discloses embedding CCI in content (slide 7) and controlling copy/playback of content using the embedded CCI bits (slides 10-16); however, Winograd does not disclose detecting only a predetermined CCI portion for recording purpose and detecting all CCI for playback purpose. The prior art, taken either singly or in combination, fails to anticipate or fairly suggest the limitations of applicant's

Art Unit: 2432

independent claim, in such a manner that a rejection under 35 U.S.C 102 or 103 would be proper. The claimed invention is therefore considered to be in condition for allowance as being novel and nonobvious over prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
